

Attachment Dentistry -- Six Attachments, Six Questions

Suggested Audience: **Dentists, Lab Technicians and Dental Auxiliaries**

Precision and Semi-Precision attachments are classified according to function. Six different attachments are discussed and the function of each is described. The participants will understand why different attachments are used in various treatment planning scenarios.

Course Objectives:

At the completion of this course, dentists will:

- Understand how attachments can be used to protect teeth or implants
- Understand how dental attachments allow the prosthesis to move in various directions
- Simplify the treatment planning process and attachment selection
- Understand that attachments serve to redistribute occlusal forces
